

Project Name: Bet Brawl

Business Context: A gambling app with an in-app currency, where you could do 1 vs 1 gambling with other users. It features competitive gambling and people can interact with one another. There will be leaderboards and rewards you can buy with your tokens.

Problem Statement:

Many Gambling enthusiasts struggle to find a seamless and engaging platform that combines accessibility, gambling tools, and user experience. Gambling and online gambling has become a very repetitive algorithm that after a while becomes disengaging and predictable. Leading to a downfall in addiction. Online gambling apps lack transparency, originality, and profile personalization creating a dull experience for the user.

The problems the app will be focusing on is 1. User engagement by adding the 1v1 feature emphasizing skill and strategy and adding a social dimension. And 2.) personalization with your winnings from gambling, you can personalize your profile, choose how much you want to bet, what games you want to play, and compete against users of the same rank making the experience feel unique and personalized.

Scope:*In Scope:*

We will support in-app currency.

We will support DM's between the users.

Out of Scope:

We will not be able to support gambling real-life objects.

We will not connect to other gambling services or sites

We won't allow the use of outside currencies

Assumptions:

It will be assumed that the user will have the hardware/software to access our application.

Features:

The user's will be able to collect and use tokens in the application to 'gamble'.

The user will be able to post images and text to show their winnings.

The user's currency will be displayed on their page.

The user will be able to switch between dark and light themes.

The application will have a leaderboard.

There will be ranks/levels that you can level up with XP by winning.

There will be a 1 vs 1 mode.

There will be moderation for chats between users

Users will be able to use their tokens to customize their profile/character

Non-Functional Requirements:

The app will be optimized for clarity for the user to gamble as efficiently as possible

The 1v1 gambling will be secure end-to-end so the users' funds can not be stolen

The app will reliably be online even during peak hours
